TheraBrite PLUS Teeth Whitening Toothpaste: For Cleaner Whiter Teeth

Just brushing your teeth with regular toothpaste may not be enough because brushing will not get rid of all stains and will not necessarily make your teeth any whiter. This is especially true if you use commercial toothpastes. However, with [TheraBrite PLUS Teeth Whitening Toothpaste](#), you can be sure to not only have cleaner teeth but whiter teeth as well.

What It Is

TheraBreath is a company that has been known to provide revolutionary oral care products to many breath clinics around the United States. TheraBreath is used by millions of people worldwide and these same people can attest to TheraBreath products as being behind the solution for their bad breath and whiter teeth. The TheraBrite PLUS Tooth Whitening Toothpaste is one of the products of that the company makes.

Why TheraBrite PLUS Toothpaste?

There are actually two ways to get whiter teeth. One way is to get it done professionally at your dentist's office. The second way is to do it all in the comfort and privacy of your own home. For those who are afraid of going to the dentist, the latter choice might be the best way to go and using [TheraBrite PLUS](#)

[tooth](#) [paste](#) makes it easy.

The procedure of bleaching usually involves the use of molds that are filled with peroxide which are pressed against your teeth and gums for a few hours. It's not a comfortable experience and it can set you back anywhere between \$500 and \$1000!

This is where *TheraBrite PLUS* can be of great help. For less than \$50 you can get a kit that will help you whiten your teeth. And it doesn't stop there. This **teeth whitening toothpaste** can also help you to freshen your breath and also clean your teeth in the process.

How Does It Work?

There are a few ways that you can whiten your teeth at home. This can be anywhere between brushing your teeth and using formula strips directly placed on top of your teeth. However, the best way to really whiten and clean your teeth is to apply formulas (like TheraBrite PLUS Toothpaste) onto trays and then applying them to your teeth.

However, if you are really comfortable using a toothbrush, then you might want to stick to the TheraBrite formula because there is no glycerin in it, which makes this formula more unique than others. This means that it will not

make your teeth more sensitive as some whitening products can. Glycerin and peroxide do not work too well together because the combination can strip the enamel off of your teeth, causing the sensitivity.

A five-day regimen using TheraBrite PLUS Teeth Whitening Toothpaste and kits from TheraBreath should guarantee that you have whiter and cleaner teeth. If you are still not convinced, then you may as well try the product first. Since it promises no side effects, there should be no harm in giving it a try.
